## BlackBox Logic Hires New RMBS Analyst

Friday May 7th, 2010 By: AFP Staff

BlackBox Logic LLC, a data aggregation service company providing a comprehensive database of loan-level collateral underlying non-agency residential mortgage-backed securities (RMBS) for investors, broker/dealers and researchers, today announced the hiring of Cory Lambert as senior mortgage-backed securities (MBS) analyst.

Cory's trading desk experience will be invaluable as we deliver customized loan-level data solutions for a wide variety of mortgage market participants," said Larry Barnett, CEO of BlackBox Logic.

Lambert will be responsible for building collateral analytics using BBx Data, the company's signature loan-level data aggregation service, and integrating the data with complementary data sets. He also will oversee the integration of BBx Data with web-based delivery platforms, including the company's proprietary Crystal Logic interface and 1010data, and help develop client-focused solutions to enhance the utility of BlackBox Logic's product line.

Prior to joining BlackBox Logic, Lambert spent four years on the trade desk of Braddock Financial analyzing and trading non-agency RMBS.
